## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 112***

1. Claims 1-9 are rejected under 35 U.S.C. 112, first paragraph, as based on a disclosure which is not enabling. Disclosing the materials of the separator are critical or essential to the practice of the invention, but not included in the claim(s) is not enabled by the disclosure. See *In re Mayhew*, 527 F.2d 1229, 188 USPQ 356 (CCPA 1976). The specification does not cited materials for the separator that would allow the separator to have a shut-down temperature of 162 degrees C or less; having an area contraction ratio at 120 degrees C being 15% or less or having the difference between the film-breaking temperature and the shut-down temperature being 20 degrees C or higher at the time when the temperature rises at 15 degrees C/min.

### ***Conclusion***

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Ubukawa et al. (JP 63-205048, abstract) teaches and nonaqueous electrolyte battery comprising a separator formed with a crosslinked polyethylene microporous film to prevent the breakage of the separator.

Motomura et al. (JP 2002-246000, abstract) teaches a nonaqueous secondary battery with an excellent reliability capable of controlling a temperature of a battery where the battery comprises a separator comprising three or more layers comprising polyolefin.
